(10.0.0.0 - 10.255.255.255)

AWS Region and Zones

Create VPC Using Wizard

Launch Web Server in Public Subnet

```
#!/bin/sh  
yum -y install httpd php  
systemctl enable httpd  
systemctl start httpd  
cd /var/www/html  
echo "Web Server Running in Public Subnet" >index.html
```
