CloudWatch Introduction

CloudWatch is used for monitoring and observing AWS services. It collects monitoring and operational data. You can use it to find abnormal behavior in your environments, set alarms, view logs and metrics, take actions, troubleshoot, and get valuable information to keep your resources running properly.

CloudWatch Lab Setup

EC2 CloudWatch   CloudWatch Alarm   SNS   Email
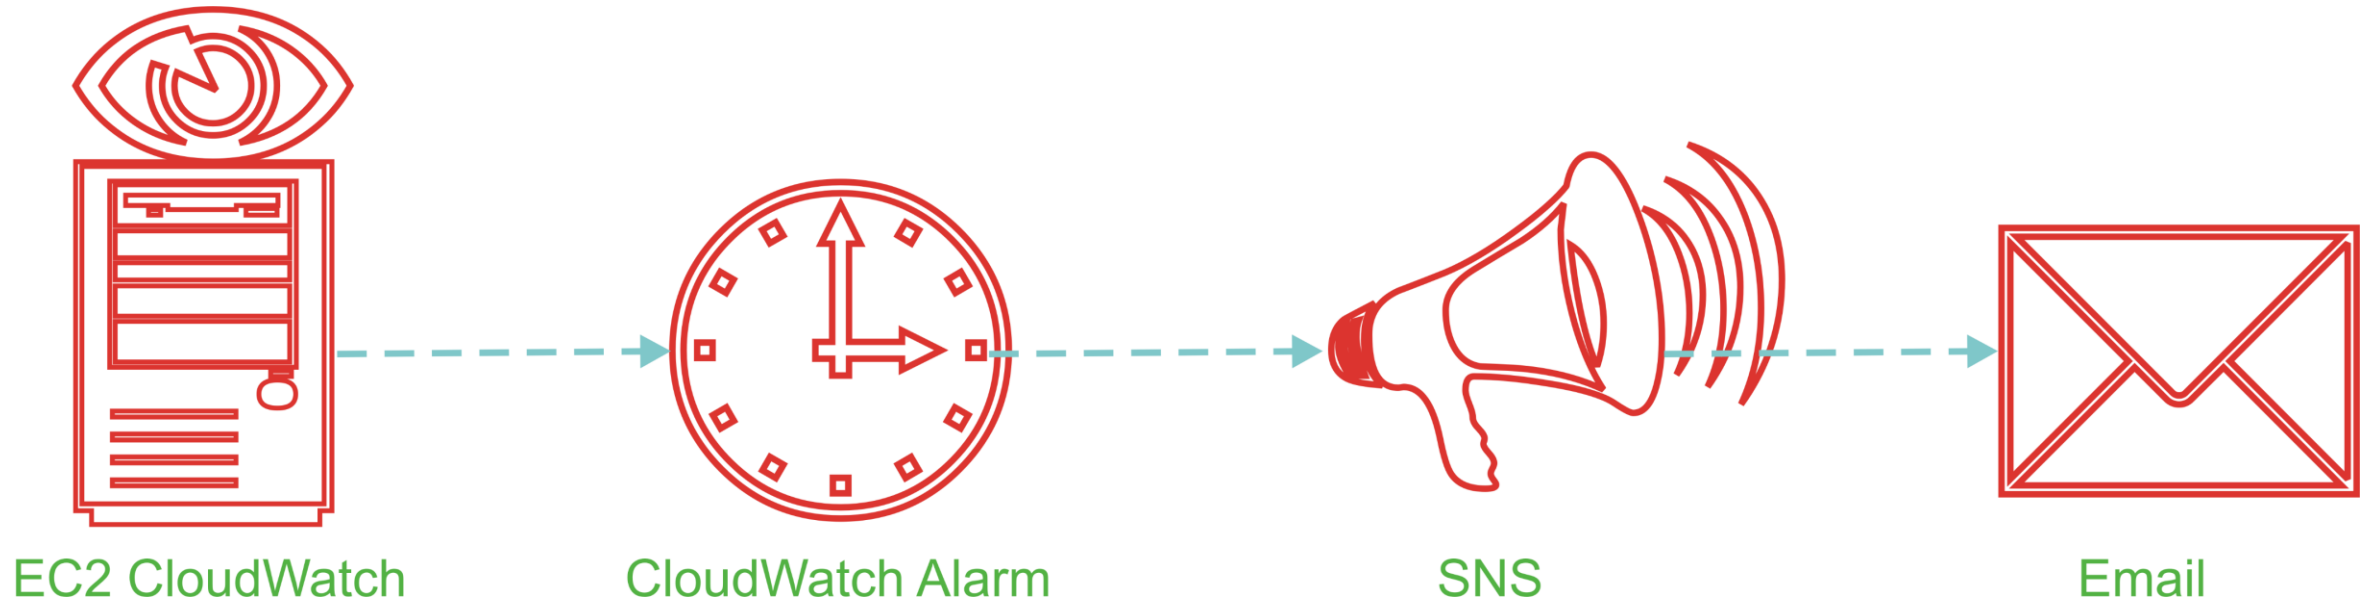

SNS: Simple Notification Service

Various Steps

 - Create SNS Topic

- Create EC2 Instance with User Data and Enable Detailed Monitoring

- Create CloudWatch Alarm

- Test Using Stress Tool

- Delete Resources
